VMware-driven Private, Hybrid, & Multi-Cloud Solutions

We focus on helping VMware-centric clients and partners adopt and implement, highly performant, scalable and cost-effective cloud solutions.

With full administrator-level access to VMware vCenter, we enable clients with easy integration, migration, and management of VMware workloads in the cloud.

Our core private-hosted cloud is used by thousands of clients to support use-cases like Production, Disaster Recovery, Virtual Desktops, Dev/Test, and Backup.

Faction Cloud has a simple building block approach

Every Faction Cloud environment starts with a Faction Bloc, our core initial cloud bundle.

Clients can independently add compute, storage, and networking resources to their Faction Cloud Bloc to increase capacity or performance.
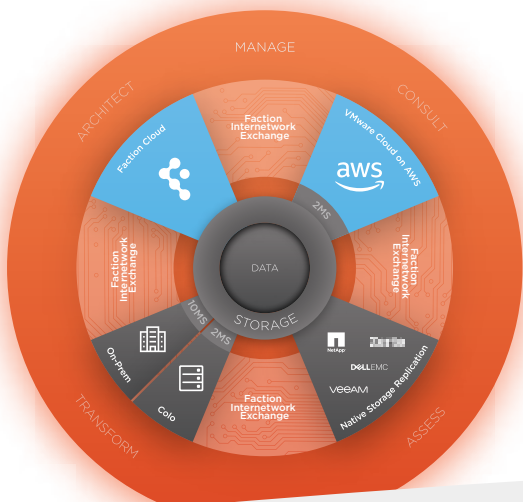

Included in every Faction Bloc, we provide a dedicated instance of VMware vCenter, VMware Enterprise Plus, NSX Manager, vRealize Operations Manager, and more.

Giving you the flexibility and control to deploy a cloud that out-performs on-premise workloads, but with a familiar, VMware, look and feel.
